ABERCRAVE, SWANSEA

February, 1990.

Dear Sir,

After witnessing a test carried out by Mr. John Howells of Pro Tec , on three of our vehicles, we the undersigned, take this opportunity to verify the following:-

One of the vehicles in our fleet is a Mercedes 207 twelve seater minibus, which has clocked over 400,000 miles. This vehicle is used every day, but due to lack of engine compression, for the past 4 or 5 months the vehicle would not start, therefore each morning, the most convenient and least time consuming way of starting it has been to tow it. It must be said that the usual maintenance on heater plugs, injectors, and injection pump had been carried out weeks before, so every indication was that the vehicle was losing compression.

Mr. Howells used the following PRO TEC products:- one can of Engine Flush, and one can of Diesel Fuel Conditioner and because of the excessive mileage on this vehicle, he suggested that the bus be driven for about 8 miles. On returning to base the engine oil was drained and the filter changed. To the clean oil he added one can of oil booster. We hoped that the demonstration would be successful, but we had to wait until morning for the results. Next day, following Mr. Howells use of the PRO TEC products on the minibus, the engine compression was restored. The vehicle now starts every morning without difficulty. We are delighted. It is incredible to note how quickly the job was done. The time saved in terms of man hours is incaluable.

The other vehicles treated with PRO TEC , gave equally startling results. We understand that this letter may be shown to other prospective PRO TEC clients, and we would be happy to confirm our satisfaction with this product to anyone should they wish to contact us by telephone at the above address.

On the basis of these results, we will obviously be using PRO TEC Products on our vehicles.

Yours faithfully,

Darrel Long, Service Engineer.

Gareth Evans, Transport Manager.
