4th February, 1991

Dear John,

We felt that we must write to you, to let you and perhaps other clients of yours know what startling results we have had with your engine flush.

A very good customer of ours had a drastic loss of oil pressure after a journey to London. He rang us and we arranged for the vehicle, a Rover 825i D Reg. to be brought back to us at Cardiff by relay transporter. On arrival we added to the old engine oil, a can of your Pro Tec Engine Flush, ran the vehicle on fast tick over for 20 minutes, then drained the oil and changed the filter to find an improvement. We temporarily fitted a more accurate gauge to have a better idea of what the pressure was.

On finding no more improvement we proceeded to strip and clean the oil pressure relief valve, and replace. We then rebuilt and used your Pro Tec Engine Flush again, and yet again, three times in total, and with each application the oil pressure improved dramatically. Now with the original pressure gauge reconnected, the owner maintains that the oil pressure is higher than its ever been. Our original estimate for the job was no longer relevant, so you can imagine what that customer felt when we presented him with the now revised bill.

Total satisfaction. Thank you Pro Tec.

Yours sincerely,

J. V. Rees.
